

**Quality Products Since 1968**

Manufactured by:

**Helm Welding (1983) Limited**

### **Front Mount Snowblowers**

**LUCK // NOW** can custom fit any of its already renowned standard rear mount snowblowers to be front mounted to most tractors.

Due to the number of different variations and options available on tractors, all of our front mount snowblowers are custom fit to each individual tractor.

As a result, we need the exact tractor or an identical duplicate from a local dealer at our manufacturing facilities in Lucknow, Ontario to custom fit the snowblower to it.

In most cases, tractors with rear mount, mid mount or front mount pto's can have snowblowers fitted to them.

For quick responses it is best to have details on your tractor at hand that you can supply to us: dimensions (including ground clearance, axle widths, overall tire widths and wheelbase), pto information (including rotation speed and direction), pictures of the tractor showing the front end and ground clearance.

For more information on front mounting snowblowers contact **LUCK // NOW** directly.

### **Commercial Snowblowing – Custom Modifications**

Many options and custom modifications are available for commercial snowblowers:

- Orbital motor chute rotator
- Truck loading chute extension
- Telescopic chute
- Reinforced end plates
- Heavier auger tube and larger shafts and bearings

Contact **LUCK // NOW** directly for a complete listing of possibilities.
